

# WIDESCAN MOBILE APP

## NEW FEATURE!

The WIDESCAN mobile app now has a *My Favorites* section that allows users to save and upload configurations.

### SAVE A CONFIGURATION

After a successful install, save the configuration to *My Favorites*. This allows multi-sensor application installations to be much more efficient and reduces the risk of human error.

### UPLOAD A CONFIGURATION

Have a new install that's identical to one you've already completed? Quickly upload a previously saved configuration to the new sensor.

### SHARE CONFIGURATIONS

Is one of your teammates facing a new install similar to one you've already done? You can share saved configurations for them to import and upload directly to their sensor(s).
