

QUICK SETUP GUIDE

COMBINED RADAR ACTIVATION AND ACTIVE INFRARED SAFETY SENSOR

1 Description

The G3 Quick Setup Guide is for the installation and setup of the G3. This document is provided for installers and service personnel who are familiar with the G3. For those who are not completely familiar with the installation and setup of the G3, BEA recommends following the detailed installation and setup instructions found in the G3 User's Guide document number 75.5640.

2 Installation / Wiring / Setup

1 Mount Sensor

 Using scale on template, position drawing of sensor on template 0" to 2" from bottom of header.

NOTE: Flush mount with bottom of header is necessary for all negative IR angles.

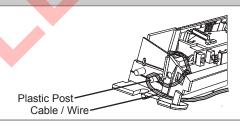

- Drill hole marked for wire passage and drill pilot holes for screw mounting. Remove template prior to sensor installation.
- Insert mounting screws approximately halfway in and install the G3 on the screws. When in place, tighten screws to secure to header.

NOTE: Leave cover off until mechanical adjustments are complete.

2 Cable Routing

- With G3 in place, locate the enclosed cable and feed the stripped end through the wire passage hole in the header.
- Leave enough slack to allow connection to the G3 and proper routing of wire around the plastic post.

NOTE: Observe proper routing of the cable as shown. This is to divert rainwater from the G3 if water should run down the cable. Proper routing of the wire also provides easier installation of the cover.

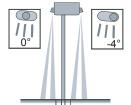

3 Sensor Wiring

1. When connecting to a microprocessed control box, the motion output and presence output wires may be connected to separate inputs or may also be connected to a mutual input. Some controls may only have an activation input, while others may have an activation input, as well as a safety (or presence) input.

6 Wire Configuration (Preferred Configuration)	4 Wire Configuration (Mandatory Remote Setup: Unlock, F1, 1, Lock, Lock)		
W	W		

4 IR Presence Sensing Field: Width and Depth (wide lens installed as default)

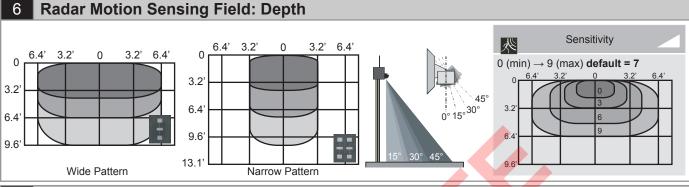

Dimensions Are Approximate Size IR Patterns	Mounting Height of Sensor			
	7'	10'	12'	14'
Narrow Lens Depth of Two Curtains	1'3"	1'6"	1'8"	1'10"
Narrow Lens Width of Curtains	3'6"	5'	6'	7'
Wide Lens Depth of Two Curtains	1'3"	1'6"	1'8"	1'10"
Wide Lens Width of Curtains	6'6"	10'	12'	14'

max. 3" HH max. 3" Sensor Plastic Pin Indicator Sensor Adjustment Screw

1. The IR pattern may be adjusted by moving the pattern nearer or further away from the face of the door by adjusting the tilt angle from +4° to -4°. A counterclockwise rotation of the adjustment screw will move the curtain further away from the door and clockwise rotation will move the curtain toward the door. Precise location of the IR beam may be found by using BEA's Spotfinder P/N 10SPOT.

7 IR Presence Sensing Field / IR Assisted Setup

An Assisted Setup is Required after installation and any time after mechanical IR adjustments. With remote unlock, setup (magic wand), 0. Or to perform a manual assisted set up; simply momentarily depress the right most push button on the top right of the G3. The red & green led will alternately flash approximately 16 seconds during set up. Keep area clear of traffic during this process. If the G3 flashes fast red after the assisted setup then an error has occurred. Repeat the assisted setup or see the G3 user guide troubleshooting section pages 8-9.

F1 Optional Setup Configurations F1

<u>F1 Function</u>: For a 4 wire connection in lieu of a 6 wire connection - see step 3 for wire connections.

The purpose of selecting safety output redirection using the universal remote (Unlock, F1, 1, Lock, Lock) is to allow the installer two options as outlined below. With either option; it is absolutely mandatory to redirect the safety signal to the green & white wires. Using the remote control follow this sequence: Unlock, F1, 1, Lock, Lock. If this is not done the safety signal will not keep the door(s) open if a person occupies the threshold area even if the G3 red LED is indicating detection.

Option 1: To enable the G3 to function correctly with older non microprocessed controls. This disables the brown and blue wire function and redirects the output of the safety signal to the green and white wires. Both motion and presence will now output on the green (NO) and white (COM) wires.

Option 2: If the installer wants a 4 wire connection in lieu of the preferred 6 wire connection, simply use the red and black wires for power and the green (NO) and white (COM) for a combined output signal of the motion and presence zone.

NEW SIMPLIFIED G3 Setup Configurations IR Immunity

- 1: Normal
- 2. High (May be used in highly reflective applications or in extreme cases of snow, rain, pedimats or lighting.)

Do not leave problems unresolved. If a satisfactory solution cannot be achieved after troubleshooting a problem, please call BEA, Inc. If you must wait for the following workday to call BEA, leave the door inoperable until satisfactory repairs can be made. Never sacrifice the safe operation of the automatic door or gate for an incomplete solution. The following numbers can be called 24 hours a day, 7 days a week. For more information, visit www.beasensors.com.
