EAGLEUnidirectional activation sensor for

automatic, pedestrian doors

- 1. main connector
- 2. wide zone antenna
- 3. narrow zone antenna
- 4. push buttons
- 5. cover

TECHNICAL SPECIFICATIONS

TECHNICAL SPECIFICATION	13
Technology:	microwave and microprocessor
Transmitter frequency:	24.150 GHz
Transmitter radiated power:	< 20 dBm EIRP
Transmitter power density:	< 5 mW/cm ²
Detection mode:	motion
Min. detection speed:	2 in/s
Supply voltage:	12 – 24 VAC ±10%; 12 – 24 VDC +30% / -10%
Mains frequency:	50 – 60 Hz
Max power consumption:	< 2 W
Output: max. contact voltage: max. contact current: max. switching power:	relay (free of potential changeover contact) 42V AC/DC 1A (resistive) 30W (DC) / 60VA (AC)
Mounting height:	6' – 13'
Degree of protection:	IP54
Temperature range:	-4 – 131 °F
Dimensions:	4.7" (L) × 3.1" (H) × 2.0" (W)
Tilt angles:	0 – 90° vertical; -30 – 30° lateral
Material:	ABS
Weight:	7.6 oz
Cable length:	8'
Norm conformity:	R&TTE 1999/5/EC, LVD 2006/95/EC, RoHS 2 2011/65/EU

Specifications are subject to change without prior notice.

All values measured in specific conditions.

INSTALLATION TIPS

- Do not touch electrical parts.
- Avoid vibrations.
- Do not cover the sensor.
- · Avoid proximity to neon lamps or moving objects.
- The sensor may be mounted horizontally or vertically (e.g. on a ceiling or on a wall, respectively).
 - ♦ If mounting horizontally, the sensor must be mounted in front of the door.
 - ♦ If mounting vertically, the sensor must be mounted <u>above</u> the door.

How to Open the Sensor:

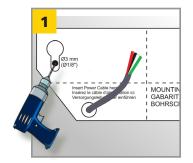

BEFORE MOUNTING

AFTER MOUNTING

MOUNTING & WIRING

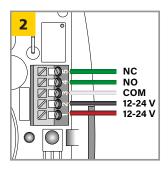

If using EAGLE SPACER or EAGLE SPACER V, please refer to User's Guide 75.5981 before beginning.

Apply the mounting template.

Drill 1 hole for the cable and pull it through.

Drill 2 holes for the screws.

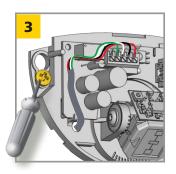

Connect the wires accordingly:

1: RED - POWER SUPPLY (+)

2: BLACK - POWER SUPPLY (-)

3: WHITE - COM

4: GREEN - NO OR 5: GREEN - NC

Position the cable as indicated. Mount the sensor firmly.

MECHANICAL ADJUSTMENTS

4

Choose the appropriate antenna (narrow or wide) for the correct detection zone width.

Narrow: 6' 6" × 8' Wide: 13' × 6' 6"

See diagram (right) for how to change antennas.

WIDE

ZONE SIZE: XXL IMMUNITY: normal

NARROW

ZONE SIZE: XXL IMMUNITY: normal

5

If desired, adjust the antenna angle (laterally and/or vertically) to position the detection field.

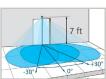

When mounting at the maximum height, the sensor manufacturer recommends a 15° tilt angle.

Observe antenna type (narrow or wide) in the illustrations below.

LATERAL ADJUSTMENT

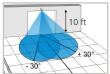

WIDE

NARROW

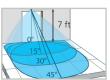

VERTICAL ADJUSTMENT

SETTINGS

6

Program the sensor for the desired application, using the remote control or push button options.

When mounting at the maximum height, the sensor manufacturer recommends the following: Immunity = low

Zone Size = XXL

ACCESS CODE

Access codes (1 to 4 digits) are recommended to set sensors installed close to each other.

Once you have saved an access code, you always need to enter this code to unlock the sensor. If you forget the access code, **cycle the power**. For the first minute, you can access the sensor without an access code.

NOTES

BEA, INC. INSTALLATION/SERVICE COMPLIANCE EXPECTATIONS

BEA, Inc., the sensor manufacturer, cannot be held responsible for incorrect installations or incorrect adjustments of the sensor/device; therefore, BEA, Inc. does not guarantee any use of the sensor/device outside of its intended purpose.

BEA, Inc. strongly recommends that installation and service technicians be AAADM-certified for pedestrian doors, IDA-certified for doors/gates, and factory-trained for the type of door/gate system.

Installers and service personnel are responsible for executing a risk assessment following each installation/service performed, ensuring that the sensor/device system performance is compliant with local, national, and international regulations, codes, and standards.

Once installation or service work is complete, a safety inspection of the door/gate shall be performed per the door/gate manufacturer's recommendations and/or per AAADM/ANSI/DASMA quidelines (where applicable) for best industry practices. Safety inspections must be performed during each service call – examples of these safety inspections can be found on an AAADM safety information label (e.g. ANSI/DASMA 102, ANSI/DASMA 107, UL294, UL325, and International Building Code).

Verify that all appropriate industry signage, warning labels, and placards are in place.
