# IXIO-DT1 MOTION AND PRESENCE SENSOR FOR AUTOMATIC SLIDING DOORS

Visit website for available languages of this document.

Download the BEA DECODER app for a quick overview of settings

## **DESCRIPTION** -

- 1. cover
- 2. LED window
- 3. radar antenna
- 4. AIR curtain width adjustment
- 5. LCD

- 6. AIR lenses
- 7. AIR curtain angle adjustment knob
- 8. main adjustment knob
- 9. main connector

## ACCESSORIES

10IMB Bracket accessory

35.1609: black cover 35.1302: white cover 35.1303: silver cover

10ICA Ceiling accessory

10CDA Curved door accessory

10URA Universal rain accessory

10IXIOSPACER Spacer

This device can be expected to comply with Part 15 of the FCC Rules, provided it is assembled in exact accordance with the instructions provided with this kit. Operation is subject to the following conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## READ BEFORE BEGINNING INSTALLATION/PROGRAMMING/SETUP

#### INSTALLATION

The sensor should be mounted securely to avoid extreme vibrations.

Do not cover the sensor.

Avoid moving objects and light sources in the detection field.

Avoid highly reflective objects in the infrared field.

#### MAINTENANCE

It is recommended to clean the optical parts <u>at least once</u> <u>a year</u> or more if required due to environmental conditions.

Do not use aggressive products to clean the optical parts.

#### SAFETY

The door control unit and the header cover profile must be correctly grounded.

Only trained and qualified personnel are recommended for installation and setup of the sensor.

Following installation, always test for proper operation (according to ANSI 156.10) before leaving the premises.

The warranty is invalid if unauthorized repairs are made or attempted by unauthorized personnel.

## **TECHNICAL SPECIFICATIONS**

TECHNOLOGY / PERFORMANCE						
Detection mode:	Motion minimum detection speed: 2 in/s	Presence typical response time: < 200 ms (max: 500 ms)				
Technology:	Microwave doppler radar Transmitter frequency: 24.150 GHz Transmitter radiated power: < 20 dBm EIRP Transmitter power density: < 5 mW/cm <sup>2</sup>	Active infrared with background analysis Spot: 2" × 2" (typ) Number of spots: max. 24 per curtain Number of curtains: 2				
Mounting height:	6'6" – 11'6" local regulations may impact acceptable mounting height (pedestrian applications only)					
Sensor temperature range:	-13 – 131 °F * 0 – 95% relative humidity, non-condensing LCD screen is operational from 14 – 131 °F. The sensor may still be programmed in colder temperatures, but with the remote control.					

#### ELECTRICAL

#### Output

Max. contact ourent: 1 A Max. contact voltage: 30 VAC Adjustable hold time: 0.5 - 9 sRelay 2Solid-state relay (potential and polarity free) Max. contact current: 100 mA Max. contact voltage: 42 VDC / 30 VACTest/Monitoring input:Sensitivity: Low: <1 V High: > 10 V (max. 30 V) Response time on test request: typical < 5 ms	Relay 1	Electromechanical relay (potential and polarity free)

Compliance: ISO 13849 PL «c» CAT. 2	FCC certification:	FCC: G9B-100606
•		IC: 4680A-100606
(under the condition that the door control system monitors the sensor at least once per door cycle)	Compliance:	ISO 13849 PL «c» CAT. 2
		(under the condition that the door control system monitors the sensor at least once per door cycle)

Specifications are subject to change without prior notice. All values measured in specific conditions.

## HOW TO USE THE LCD

#### DISPLAY DURING NORMAL FUNCTION

impulse

Password

XXXX

Not during the first minute after

power-on of the sensor.

Negative display = active output

To adjust contrast, push and turn the grey button simultaneously. *During normal function only.* 

#### FACTORY VALUE VS. SAVED VALUE

AIR:Immunity

displayed value = <u>factory</u> value

displayed value = <u>saved</u> value

English

Deutsch

During the first 30 seconds after power-on of the

#### NAVIGATING IN MENUS

1) Push to enter the LCD menu. 2) Enter password, if necessary. 3) Select language before entering the first LCD menu.

Select **Back** to return to previous menu or display.

sensor or later in the diagnostics menu.

Select More to go to next level: - basic settings (MENU 1)

- advanced settings (MENU 2)

- diagnostics (MENU 3)

#### CHANGING A ZIP CODE

1) Navigate to menu 3 (Diagnostics).

= scroll

2) Select "ZIP code".

See application note on ZIP CODE (76.0024). 3) Change the code as desired.

ZIP code E24 1 56-KG4 01 0 800/02F
ZIP code <u>E</u> 24 1 56-KG4 01 0 800/02F
ZIP code 24 1 56-KG4 01 0 800/02F
ZIP code

24 1 56-KG4

01 0 800/02F

To activate the new ZIP code, you must validate the last digit (see below):

- v = valid ZIP code (values will be changed accordingly)x = invalid ZIP code (no values will be changed)
- v/x = valid ZIP code, but from a different product

ZIP code ++24 1 56-KG4 01 0 800/02

\*only available values will be changed\*

## VALUE CHECK WITH REMOTE CONTROL

Pressing a parameter symbol on your remote control displays the saved value directly on the LCD screen. Additionally, the green LED will blink the number of times that the parameter is set to. Do not unlock first.

Note: When querying FIELD SHAPE, the green LED will blink the number of times that it is set to, and then the green LED will blink either 1 time (narrow shape) or 2 times (wide shape).

## 1 MOUNTING & WIRING

#### MOUNTING

Using the provided mounting template, mount the sensor, ensuring that the bottom of the sensor is within 2 inches of the bottom of the door header.

Refer to Application Note 76.0035 if an IXIO Spacer is required for the given application.

Route the harness (20.5349) using the harness clip as shown in the exploded view of the mounting illustration.

Sensor connectivity (power and relays) must utilize only the supplied harness.

Sensor power must be supplied from a Class 2 supply source limited to 15 W.

Sensor is intended to be monitored for proper operation by the door operator or system.

Harness shall be routed separated from any Mains or non-Class 2 voltage cable for correct operation or shall be rated for the Mains voltage, and suitable protection and routing means shall be used according to National and Local Codes to prevent damage to the harness and/or IXIO sensor.

#### WIRING

	RED	POWER SUPPLY	
	BLACK	POWER SUPPLY	
	BROWN	SAFETY INPUT	D
~	BLUE	SAFETY INPUT	DOOR
S 0	WHITE (COM)		
SENSOR	YELLOW (N.C)		CONTRO
	GREEN (N.O.)		β
	PURPLE	TEST OUTPUT*	
	PURPLE	TEST OUTPUT*	

#### VOLTAGE

Power: 12 – 24 VAC, 50/60 Hz 12 – 30 VDC 2.5 W (max)

Test: low: < 1 V high: > 10 V (30 V max.) response time: typ. < 5 ms

\* The sensor LED will briefly flash RED during monitoring communication with door control, indicating that external monitoring is functional. Monitoring functionality must be active on the sensor, door control, and monitoring wires must be properly connected to the door control.

## 2 RADAR OPENING IMPULSE FIELD

The size of the detection field varies according to the mounting height of the sensor. The following graphics are representations – not default settings.

field size: 9 immunity: 2

field size: 9

immunity: 2

from -15° to 15°, default 0°

**WIDTH** 

1 × 1 grid is approximately 3.28 ft × 3.28 ft.

red LED = presence detection

## **3** INFRARED SAFETY FIELD

#### ANGLE

Activate the visible spots to verify the position of the AIR curtain.

Visibility depends on external conditions. When spots are not visible, use the Spotfinder to locate the curtains.

The distance between the inner curtain of the inside door sensor and the inner curtain of the outside door sensor should always be smaller than 8 in.

- C1 = closest to sliding door
- C2 = farthest from sliding door

If necessary, adjust the AIR curtain angle (from -7° to 4°, default 0°).

WIDTH

Part of the detection field can be masked to reduce its width. The arrow position determines the width of the detection field.

The size of the detection field varies according to the mounting height and the settings of the sensor. Wide setting has 1:1 ratio. For example, a 6-foot mounting height will project a 6-foot detection width at floor.

Always verify the actual detection field width by walk-testing according to ANSI 156.10.

Additional adjustments are possible by LCD or remote control (see OVERVIEW OF SETTINGS).

## NOTES

Note 1	Always use a screwdriver when making further AIR adjustments to the arrow position on the sensor.				
Note 2	RADAR AIR				
	NO = normally open	NO = normally open			
	NC = normally closed	NC = normally closed			
	DeEner = de-energized relay (active)				
	Energ = energized relay (passive)				
Note 3	The sensor LED will briefly flash RED during mor indicates that external monitoring is functional.	nitoring communication with door control. This			
	Monitoring functionality must be active on the sensor and door control, and monitoring wires must be properly connected to the door control.				
Note 4	MTF = uni-directional with motion-tracking feature				
	uni + reentry: BEA recommends only adjusting	using the LCD			
Note 5	REDIRECTION setting (F1 on remote control):				
	R1-MW, R2-IR (F1=0):				
	R1 = MW (i.e. motion detection)				
	R2 = IR (i.e. presence detection)				
	R1-MW or IR, R2-IR (F1=1):				
	R1 = MW or IR (i.e. motion or presence detection)				
	R2 = IR (i.e. presence detection)				
Note 6	partial: outputs are not reset				

#### LED SIGNALS -

(red)

Presence detection

BEHAVIORS

LED flashes x times

### **TROUBLESHOOTING**

-	E1: ORANGE LED flashes 1x	The sensor signals an internal fault.	Replace sensor.	
$-\frac{1}{2}$	E2: ORANGE LED flashes 2x	The power supply voltage is too low/high.	Check power supply voltage in diagnotistics menu (menu 3) of the LCD.	
			Check wiring.	
-	E4: ORANGE LED flashes 4x	The sensor does not receive enough AIR energy.	Decrease the angle of the AIR curtains.	
			Increase the AIR immunity filter.	
			Deactivate curtain #2 (C2, outer curtain).	
$-\frac{1}{5}$	E5: ORANGE LED flashes 5x	The sensor receives too much AIR energy.	Slightly increase the angle of the AIR curtains.	
			Decrease the AIR immunity filter.	
		The sensor is disturbed by external elements.	Eliminate the cause of disturbance (lamps, rain cover, door controller housing properly grounded).	
	E8: ORANGE LED flashes 8x	AIR power emitter is faulty.	Replace sensor.	
$\bigcirc$	ORANGE LED is on	The sensor encounters a memory problem.	Cut and restore power supply.	
			If ORANGE LED illuminates again, replace the sensor.	
☀	RED LED flashes quickly after an assisted setup	The sensor sees the door during assisted setup.	Move the AIR curtains away from the door.	
			Install the sensor as close to the door as possible. If needed, use a bracket assembly.	
			Ensure that the bottom of the sensor is mounted within 2" of the bottom of the door header.	
			Launch a new assisted setup.	
	RED LED illuminates sporadically	The sensor vibrates.	Check if the sensor is secure.	
			Check position of cable and cover.	
		The sensor sees the door.	Adjust the AIR angle and launch an assisted setup.	
		The sensor is disturbed by external conditions.	Increase the AIR immunity filter.	

## **TROUBLESHOOTING (cont.)**

$\bigcirc$	GREEN LED illuminates sporadically	The sensor is disturbed by rain and/or leaves.	Increase radar immunity filter.		
		Ghosting created by door movement.	Change radar field angle.		
		The sensor vibrates.	Check if the sensor and door cover is secure.		
			Check position of cable and cover.		
		The sensor sees the door or other moving objects.	Remove the objects if possible.		
			Change radar field size, angle, or immunity.		
$\bigcirc$	The LED and the LCD displays are off	No power to sensor.	Check wiring.		
			Check for correct power supply.		
	The reaction of the door does not correspond	Incorrect output configuration / wiring.	Check output configuration setting.		
	with the LED signal	<u>,</u>	Check wiring.		
	Cannot access LCD menu or change parameters via remote control	The sensor is protected by a password.	Enter the correct password. If you forgot the code, cut and restore the power supply to access the sensor without entering a password during 1 minute.		
	Sensor does not respond to remote control	Dead batteries.	Replace batteries.		
₩	RED Visible External Monitoring (Test Indication LED) does	Monitoring installation/setup error.	Verify door control is capable of monitoring and the sensor monitoring wires are properly connected to the door control.		
	not flash		Verify monitoring (TEST) is ON in the sensor settings.		
		Sensor malfunction.	Replace the sensor.		
•	RED Visible External Monitoring (Test	Wiring issue.	Verify wiring.		
	Indication LED) flashes continuously	Door control not set correctly.	Verify door control monitoring set to Active Low.		
	Door cycles open and remains open	Door control monitoring set to Active High.	Set door control monitoring to Active Low.		
		Safety and/or Motion output is set incorrectly.	Correctly set the given output required for the door control.
