MINI INDUSTRIAL BRACKET

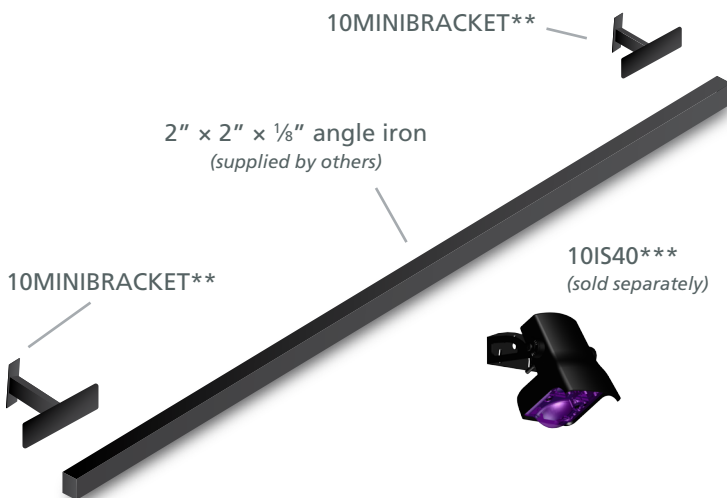

BEA's **MINI INDUSTRIAL BRACKET (10MINIBRACKET)** is the perfect solution for overhead sectional doors with a vertical or carriage lift that make it impossible to mount a BEA FALCON, IS40, IS40P, or LZR-WIDESCAN on a wall or header.

This bracket allows the angled iron mounting bar to be extended 6 to 12 inches from the door.

With the sensor mounted in the center of the bar*, your pattern is reliably projected to avoid interference from regular door operations.

* LZR-WIDESCAN may also be mounted on the left or right side of the bar

** Application requires (2) two MINI INDUSTRIAL BRACKETs, one for each side of the door.

*** Application compatible with other BEA sensors. Contact BEA to learn more.
