

▶ Touchless Retrofit Solutions

Easily change existing door configurations from push plates to touchless door actuators.

Reduce Service Time

Utilize existing in-wall wires to power touchless actuator and transmitter

Wireless Door Activation

900 MHZ RETROFIT TRANSMITTER eliminates the need to run additional wires

Consistent Transmission

Frequency hopping allows consistent transmission in areas with other 900 MHz devices

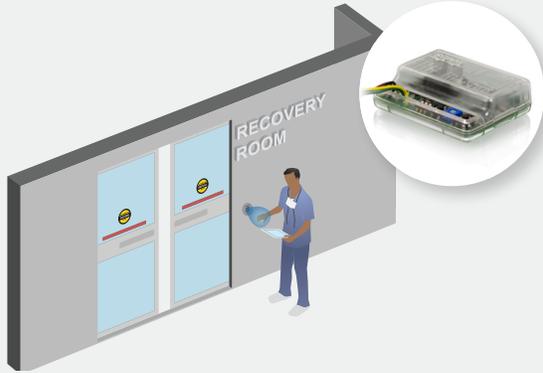

Reliable Detection

Microwave Doppler Radar technology provides consistent detection, no matter the environment

- 1** Pedestrian activates touchless switch
- 2** Retrofit transmitter sends signal to receiver
- 3** Receiver module activates door control
- 4** Door opens

▽ COMMON APPLICATIONS

DOOR ACTIVATION

BEA's 900 MHz receiver module allows wireless activation of any door control. FCC Part 15 certification ensures proper compliance with federal radio frequency regulations.

ACCESS CONTROL

BEA's BR2-900 is a 2-relay logic module with built-in 900 MHz wireless technology. Designed to provide wireless 2-relay sequence functionality, it is ideal for applications requiring sequencing of electric locking devices and automatic door activation.
